Small Group Discussion on Careers as a Medical Science Liaison with Damon Love, Ph.D.

Monday, April 4th at 10am
Med School, SHM-C125A

Pre-registration is required and you can register HERE.

Damon Love, Ph.D., Oncology Medical Science Liaison at Eli Lilly & Company in New York, NY.

Dr. Love has been interested in the clinical applications of science for more than ten years of his scientific career. Before entering grad school, he organized and hosted workshops and conferences geared towards specific topics related to biotech and pharma at the Institution for International Research. After graduating from the Department of Pharmacology at Stony Brook School of Medicine, he secured a co-appointment at Weill Cornell Medical College and Memorial Sloan-Kettering Cancer Center, a postdoctoral position that afforded him a great research project with clinical and translational relevance. Along the way, he also earned a certificate from the Fundamentals of the Bioscience Industry program, which taught him about the regulatory, clinical, and legal landscape surrounding drug development. His experiences made him a great candidate to serve as a Medical Science Liaison at Eli Lilly & Company where he now works to bridge the gap between key opinion leaders in academia and pharmaceutical companies to build mutually beneficial collaborations and relationships to fast-track new therapeutic products into clinical trials.
